**G. INCIDENT INFORMATION:**

**a. Impacted Area Details**

- Total calculated area of impact 0.194A
- Impact within R.O.W YES
- Impact outside R.O.W YES

**b. Volume of oil recovered before completion of JIV ( $V_{rec}$ ):**

Recovered oil $V_{rec}$ :	NIL	Barrels
---------------------------	-----	---------

Controlled recovery/evacuation from source with no impact to environment:

NIL	Barrels
-----	---------

**c. Net Estimated Spilled Volume  $V_{Est}$  (bbls)\* =**

30.95 BARRELS

**Estimated Reported Volume\*\*  $V_{rep}$  (bbls) =** 31 BARRELS

**\*Notes:**

- Volume estimation was done using an excel based tool. (see attached for details on the calculation)
- Reported spilled volume is an estimate

Write other relevant notes taken into consideration for estimating the spilled in the box below:

OIL IMPACT WITHIN RIGHT OF WAY IS MAINLY FROM ACTIVITIES OF AN ILLEGAL LOCAL REFINERY CONNECTED TO THEFT POINT. THE OIL IS SITTING ON WATER WITHIN A NATURAL DEPRESSION.

Calculation of the respective estimated volume is to be done on site as far as practicable using the new spill volume estimation software on site: Conversion of  $m^3$  to barrels is Volume ( $m^3$ ) x 6.29: \*\*Round up estimated volume to next whole number using the following rules:

- Any spill volume in excess of 1 bbl is rounded up to the next whole number.
- Any spill volume in less than 1 bbl is rounded up to the next 0.1 bbl.

Examples: Calculated volume = 15.3 bbl ----- Reported volume = 16 bbl  
 Calculated volume = 0.35 bbl ----- Reported volume = 0.4 bbl  
 Calculated volume = 0.01 bbl ----- Reported volume = 0.1 bbl

Wherever this estimation tool is not applicable please refer to paragraph 6c (Deviations) of the JIV procedure to use appropriate steps for volume estimation; record the calculation in a plain sheet of paper and attach to the JIV report.
